

Do you offer internships?

Yes, we offer internships to students in the final year of their Master's studies or recent graduates. Exceptions to these criteria can be considered on a case-by-case basis.

How long does an internship take?

An internship usually takes 5 or 6 months on a full-time basis. This timeframe allows for a comprehensive understanding of our software, processes, and the successful completion of a project. The usual breakdown includes 1 month dedicated to research, 3-4 months for implementation and testing, and the final month for documentation and summarizing results.

What will I do during the internship?

Before the start of the internship, we define the project topics together. Internships could involve research projects, prototyping or contributing to a product feature.

We offer diverse areas of focus, such as 3D graphics rendering, 3D design tools, or web development (backend and/or frontend). Depending on your preferences and the chosen topic, you may be integrated into a development team to gain hands-on experience in software development and contribute to the product.

Do you have also topics in AI or VR/AR?

Absolutely.

- AI projects could involve (natural) interaction with 3D cities/digital twins as well as assistant tools for urban design.
- VR/AR projects may focus on urban planning and geographic information systems.

Can I propose my own topics?

Yes, we are open to your ideas. If you don't have specific topics in mind, we can also propose several internship topics tailored to your preferences.

Will you help me to get a working permit?

No, our company does not provide work permits for interns. This means that we only can offer internships to (1) students from Switzerland or the European Union, or (2) students who already have a working permit that allows them to work full-time.

How well is the internship paid?

Very well, according to the high industry standards in Zurich.

Could I work part-time after the internship?

Yes, upon the successful completion of the internship, we would be delighted to offer you a part-time position to support you during the remaining period of your studies.

Do you offer jobs (permanent positions) to former interns?

Yes, many of our former interns have seamlessly transitioned into permanent roles within our company after their graduation.

Can I write a master's thesis at Esri?

Yes, you can write your Master's thesis at Esri if the topic fits and we can find the right supervisor in our team. We have done this in the past a few times very successfully. Please contact us for more details.

Can I write a bachelor's thesis at Esri?

No, we do not offer opportunities for Bachelor's theses. Typically, projects that align with our requirements necessitate the deeper understanding provided by a Master's program.

Is there financial compensation for a Master's thesis at Esri?

No. It is a standard Master's thesis where we only co-supervise together with a professor. It is up to you to work part-time during this time on another project or in another company.
